                                                                                                                                                                                                                                                                                                                                                        Anotes Torgan: B Ceells; Vector: pOTB7; Site_1: XhoI; Site_2: ECORI; CDNA made by oligo-dT priming.

Site_2: ECORI; CDNA made by oligo-dT priming.

Site_2: ECORI; CDNA made by oligo-dT priming.

Directionally cloned into ECORI/XhoI sites using the following 5' adaptor: GGCACGAG(G). Size-selected >500bp for average insert size 1.8kb. Library constructed by Lin Hong in the laboratory of Gerald M. Rubin (University of California, Berkeley) using ZAP-CDNA synthesis kit (Stratagene) and Superscript II RT (Life Technologies).

Note: this is a NIH_MGC Library."

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        A_Geneseq_101002:*

                                                                                                                                                                                                                                                                     ò
                                                                                                                                                                                                                                                                                            qq
                                                                                                                                                                                                                                                                                                                                                               The present sequence is human activation-induced cytidine deaminase

(AID). AID structurally relates to an RNA editing enzyme APOBEC.1 and
has cytidine activity similar to APOBEC.1. AID has antiallergic,
antianaemic, antiasthmatic, ophthalmological, anti-HIV and
dermatological activities, and can be used in gene therapy. AID
colynucleotides are useful in methods for identifying drugs for the
treatment of B cell associated immune system disorders, immunodeficiency
diseases and allergies, such as immunospobulin A (19A) deficiency
disease, 19A nephritis, gamma-globulinaemia, atopic dermatitis, allergic
colitis, asthma, food allergy, drug allergy, allergic rhinitis, Rosen
disease, Dideorge disease, ataxia telangicetasia, common variable
immunodeficiency disease, AIDS (auto immunodeficiency syndrome), elevated
If discorder, and 19G subclass selection disorder. The DNA sequences
encoding AID may be used for gene therapy and the antibodies to the AID
protein may be used for gene therapy and these disorders.

        antianemic, antiasthmatic, ophthalmological, anti-HIV and dermatological activities, and can be used in gene therapy. AID polynucleotides are useful in methods for identifying drugs for the treatment of B cell associated immune system disorders, immunodeficiency diseases and allergies, such as immunoglobulin A (1gA) deficiency disease, IgA nephritis, gamma-globulinaemia, atopic dermatitis, allergic colitis, asthma, food allergy, drug allergy, allergic rhinitis, Rosen disease, DiGeorge disease, ataxia telangiectasia, common variable immunodeficiency disease, AIDS (auto immunodeficiency syndrome), elevated IgE disorder, and IgG subclass selection disorder. The DNA sequences encoding AID may be used for gene therapy and the antibodies to the AID protein may be used for diagnosis and treatment of these disorders.
                                                                                                                                                                                                                                                                                                                                                               09

activities which would make them suitable for treating, preventing activities which would make them suitable for treating, preventing or ameliorating medical conditions in humans and animals, although no supporting data is given. Suggested activities include nutritional activity, cytokine and cell proliferation/differentiation activity, immulating (e.g. as vaccines) or suppressing activity, hemostatic activity, chemotexicic/chemokinetic activity, activin/inhibin activity, chemotexic/chemokinetic activity, hemostatic and thrombolytic activity, receptor/ligand activity, anti-inflammatory activity, camberal, turnasion suppressor activity, and tumor inhibition activity. The PNS are also stated to be useful for gene therapy. Other activities include inhibiting the growth, infection or inhibition activity. The PNS are also stated to be useful for gene therapy. Other activities include inhibiting the growth, infection or function of bacteria, fungi, viruses and other parasites; effecting bodily characteristics such as, e.g. weight, color, skin, etc., effecting blorhythms or caricadic cycles; enhancing fertility; treatment of depression; treatment of pain; hormonal or endocrine activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          75

The invention relates to novel human secreted proteins, the nucleic acids encoding them. The protein may exhibit cytokine, cell proliferation of cell differentiation activity or may induce production of other cytokines in certain cell populations and may exhibit immune stimulating or cytokines in certain cell populations and may exhibit immune stimulating or immune suppressing activity, which is useful for the treatment of an immunodefication (SCID), autoimmune disorders e.g. severe combined immunodefications (SCID), autoimmune disorders e.g. multiple sclerosis, systemic lupus erythematosus, rheumatoid arthritis, autoimmune pulmonary inflammation. The proteins are also useful in the treatment of diseases of inflammation. The proteins are also useful in the treatment of diseases (GVHD), in the induction of tumour immunity, and disorders including tissue, skin and organ transplantation and in mysloid or lymphoid cell deficiencies, wound healing and tissue repair, in the treatment of burns, incisions and ulcers; as well as in treatment of burns, incisions and ulcers; as well as in treatment of burns, incisions and ulcers; as well as in treatment of cardiac and central nervous system, amylotrophic lateral sclerosis, and Shy-Drager syndrome, infections, inflammatory processes, disease, Huntington's disease, amylotrophic and central nervous system vessel e.g. stroke, contraceptive based on the ability of inhibins to decrease fertility in female mammals and decrease spermatogenesis in male mammals. The proteins and nucleic acids are also useful as food supplements. The present sequence represents a secreted protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             MetaspProProThrPheThrPheAsnPheAsnAsnGluProTrpValArgGlyArgH1s 216

The invention relates to isolated polynucleotides (ABA90876-ABA90968 and ABA90980) and encoded proteins (ABB55698-ABB55800), especially CABA90980) and encoded proteins (ABB55690), especially CABA90980) and SEQ ID NO 19 (ABA90985) and SEQ ID NO 19 (ABB55707) contained in clones bd306-7 and yb8-1 respectively and the clones bd306-7 and yb8-1 respectively and the clones bd306-7 and yb8-1 clones bd306-7 and yb8-1 respectively and the clones bd306-7 and yb8-1 clones bd306-7 and yb8-1 respectively and the clones bd306-7 and yb8-1 closes in number 98599. The polynucleotides and encoded polypeptides have cytostatic, anti-inflammatory, immunomodulator, vulnerary, anti-inflammatory activity and acting as cytokine modulators, and anti-inflammatory activity and acting as cytokine modulators, haematopoiesis regulators, tissue growth modulators and/or cadherin and anti-inflammatory activity and acting as cytokine modulators, caheraphes, particularly for preventing, treating or ameliorating any of the following diseases: immune deficiency and disorders; e.g. bacterial corrections, autoimmune disorders, concer, systemic lupus crythematosus or graft-versus-host disease; myeloid or lymphoid cell deficiencies; wound, burns, incisions and ulcers, osteoporosis or costeoarthritis; central and peripheral nervous system diseases and neuropathies, e.g. Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis or Shy Drager syndrome; contradiation inflammatory response syndrome, ischaemia-reperfusion or systemic inflammatory response syndrome, ischaemia-reperfusion or systemic inflammatory response syndrome, ischaemia-reperfusion or type-perfusion or stroke; inflammatory bowel disease or consistence or the perpendical performance or systemic inflammatory response syndrome, ischaemia-reperfusion or type-perfusion or stroke; professes or consistence or the perfusion or syndrome.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              256
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       225

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |||::::|||:::|||335 IleSerIleLeuThrTyrSerGluPheLysHisCysTrpAspThrPheValAspHisGln 354
                                                                                                                                                                                                                                                                                                                                                 The present sequence represents a human RNA-associated protein. The expression of fRNA-associated proteins is closely associated with reproductive tissues, nervous tissues, cell proliferation including cancer, inflammation and immune responses, and so they may be used immune/inflammatory disorders, and reproductive disorders. Diseases and disorders which may be treated include actinic keratosis, and atherosclerosis, arteriosclerosis, bursitis, cirrhosis, hepatitis, mixed connective tissue disease, myelofibrosis, paroxysomal nocturnal hemoglobinuria, polycythermia vera, psoriasis, primary thrombocythemia and cancers, and trauma.
                                                                                                                                                                                                                                   polypeptides and polynucleotides, useful for preventing and uting a disorder associated with increased or decreased expression
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            16 ATGAACCGGAGGAAGTTTCTTTACCAATTCAAAATGTCCGCTGGGCTAAGGGTCGGCGT

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The human RNA editing enzyme (REE) is used in a pharmaceutical carrier for the treatment of cancer, viral diseases and circulatory system disorders. The enzyme is used in vivo for the correct processing of RNA transcripts of genes e.g. change of a codon in apolipoprotein B (apoB) RNA to give a 100 and 48 kDa product transcribed from the same gene. Certain disorders have been linked to incorrect RNA editing, e.g. failure of apo B editing leads to excessive apoB 100 production and hypercholesterolaemia. Other disorders thought to be linked to incorrect RNA processing include aberrant alpha-galactosidase processing in recombinantly to treat related disorders. It can also be used to raise antibodies for immuno-based detection of REE expression levels

This sequence represents the human RNA editing enzyme REE-2. CDNA encoding REE-2 was initially isolated in a prostate tumour CDNA library, with the CDNA encoding the present sequence representing a consensus.

REE-2 has chemical and structural homology with the human apoB mRNA celiting protein HEPR (28% identity), the rat HEPR homologue REPR (30% identity), and a portion of the mRNA editing enzyme phorbolin I (43% identity), and a portion of the mRNA editing enzyme phorbolin I (43% identity), and a portion of which were derived from tumours, neuronal tissues, immune system cells or synovial tissue from arthritis patients.

REE-2 is therefore thought to be associated with the devalopment of cancer, autoimmune disorders, circulatory system disorders (e.g., hypercholesterolaemia), viral infections and neurological diseases (e.g., hypercholesterolaemia), viral infections and neurological diseases (e.g., diagnosis, treatment and prevention of such diseases via the modulation of transcript editing, which in turn has effects on the encoded protein relates to methods of detecting nucleic acids encoding human REE-2 in a biological sample.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  91 TACGTAGTGAAG-----AGGCGTGACAGTGCTACATCCTTTTCACTGGACTTTGGTTAT 144

The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynuclectides are useful in gene therapy. A composition containing a polypeptide or polynuclectide of the invention may be used to treat diseases of the peripheral nervous system such as peripheral nervous system alseases, auch as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic alteral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as Immune system suppression, Activinhibin activity, chemotactic/chemokinetic activity, heamestatic assays for receptor activity, arthritis and inflammation, leukaemiss and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Note: The sequence data for this patent did not form part of the printed specification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      nootropic; immunosuppressant; cytostatic; gene therapy; cancer;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ۵

The present invention relates to the isolation of novel human enzyme polypeptides, and the cDNA (AAS40785-AAS41684) and genomic sequences encoding them. The enzyme polypeptides of the invention may comprise the functional classes of oxidoreductases, transferases, hydrolases, lyases, disquencies or ligases. The sequences of the invention are useful in the disorders including hyperproliferative disorders (e.g. cancer), immunodeficiency disorders (e.g. cancer), e.g. arthritis), neurological disorders (e.g. Alzheimer's disease),
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Novel polypeptides and polynucleotides useful for diagnosing, preventing, treating neural, immune system, muscular, reproductive, pulmonary, cardiovascular, renal, proliferative disorders and cancerous
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Claim 11; SEQ ID No 1546; 1180pp; English.

                                                                                                                                                               AAF15566 to AAF16505 encode the human prostate cancer associated proteins, called prostate cancer antigens, given in AAB56363 to AAB57302. The prostate cancer antigens can have neuroprotective, cytostatic, cardioactive, immunomodulatory, muscular, vulnerary, gastrointestinal, nephrotropic, antiinfective, gynaecological and antibacterial activities, and can be used in gene therapy. The prostate cancer antigen

                                                                                                                                                                                                                                                                                                                         ŏ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              the invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAAW8642-AAA42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to traat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral nervous system, such as peripheral nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and
